

Center of Excellence

Technical resources for building software best practices into your team.

Software standardization and success...

... entails more than ensuring a team uses the same software tool. Your team should be implementing consistent and proven

software practices. Three pillars of expertise are essential for ongoing success: Engineer Good Software, Engage in Community Learning, and Ensure Technical Leadership. These practices include ensuring that your architecture aligns to your application, that you have onboarding and appropriate training for your team, and the you implement software engineering processes that fit your workflow. Those teams that incorporate these best practices and choose to sit for and subsequently pass the CoE audit are awarded Center of Excellence Certification. Twelve teams world-wide enjoy this elite honor.
